**Approximately 100sqm**

Smaller spaces can be multi-functional too! Choose lightweight, flexible furniture to reconfigure your space for maximum versatility and programmatic variety. These design renderings provide you with ideas for only a few of the many possibilities of configuring a compact space.

Built-in cabinets, shelving, and stationary countertops can be a great space to host makerspace programming and provide storage for maker equipment and technologies.

Built-in banquette seating allows for small conversations or independent reading areas and utilizes the perimeter of the room. Small tables can pull up to the benches and make a great spot for a laptop or tablet.

Formal tables and chairs can be pushed together for more organized programming or workshops.

Take advantage of wall surfaces, even columns or pillars, to introduce vibrant imagery with high-resolution graphics or painted accent walls.

Lounge furniture provides patrons with comfortable seating for informal programming and conversations that promote English language learning.

A painted floor or small raised platform at one end of the room creates a stage area and focal point for lecture-style programs in the space. Suspend a projector from the ceiling and use a projection screen or blank wall as a surface for presentations, demonstrations, or film screenings!
